DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 –28, drawn to a wireless local system, classified in class 455, subclass 426.2.
 - II. Claims 29 – 35, drawn to antenna structure for a mobile subscriber station, classified in class 455, subclass 575.7.
 - III. Claims 39 – 42, drawn to antenna components, classified in class 455, subclass 272.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the antenna structure described does not necessarily require it to be use for the specifically claimed wireless local loop system. The subcombination has separate utility such as it can be used in any wireless local loop system and further the parts kit for any wireless local loop subscriber unit used in any wireless local loop system.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Mr. Richard Bauer (Registration Number 31,58) on 29 July 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
